

Frequently Asked Questions

1. What is Laser Skirmish?

Laser Skirmish is a revolutionary new outdoor, team-based mission game. Each team member is equipped with an infrared laser and sensor headgear. Players shoot an invisible and harmless infrared beam. Teams are assigned missions to complete. We have a variety of missions for every level and age of players; no mission ever plays the same twice.

2. Who can play Laser Skirmish?

Anyone aged 5 and older, male or female - everyone can play to a level that they find comfortable! Laser mission simulations are great fun for the casual player and our structured strategy missions are designed to encourage working together as a team, leadership skills and effective communication. The ultimate mission game, combining role-play and problem-solving, guarantees an experience unlike any other.

3. How do the lasers function?

The laser system has been built around a safe, robust and reliable high-tech infrared mission system with lasers modeled on futuristic-type weapons. With an effective range of 250 feet, realistic digitized sounds and multiple modes of fire, this is technology with attitude!

4. What can I expect when a mission is being organized?

On arrival at your location, you will be issued with a laser and hat with sensors attached to the laser. After an equipment & safety briefing, your marshal will go through the various scenarios and games you will play.

5. What should I wear?

Camouflage gear is best or dark clothes. Loose fitting clothing also makes running and moving around easier.

6. How well do the Lasers work indoors and at night?

The Lasers are made to work outside in bright sunlight and work the same indoors with lights or in a darkened area. The Lasers work great at night. Nighttime missions add a very different element to the missions.

7. What do I need to provide when the event is at my location?

Nothing...everything needed to play is included in the price.

8. How long do the missions last?

The length of the missions will vary from 10 minutes to 30 minutes. Several factors are considered when determining the mission time. The age of the players, the size of the field, the mission objective, the number of players that need to participate in the event and the weather conditions.

9. How do you know when you're been hit?

Our equipment is designed to eliminate cheating. When you take a 'hit' the laser will sound 'ouch'. Then once all lives have been used, the laser will display 'done' on the screen, which stops the laser from firing. Don't worry... this doesn't mean you're out of the game, lasers are re-activated but this registers as a 'done' against your team... so survival is the key.

10. How do you know when you've hit somebody?

Again you will hear the 'ouch' sound from the player's laser. When players are 'done' they must remove their hat and walk out with their laser in the air.

11. How do you win the games?

Each mission has a different objective... but many are determined on 'done' count - that's the team who eliminates the most opposing players.
